The Exhibits in Both Creative and Decorative Art, the Handiwork of the Ladies,

And Every Field of Woman's World to be Covered.

It is proposed to make the centennial of 1888, to some extent, a panoramic view of the history of Ohio. That nothing essential to a complete representation of this history may be lacking, it is proposed to organize the woman's department under the following subdepartments:

Woman in art will include exhibits in both creative and decorative art. The commissioner solicits exhibitions of painting in all its various departments -drawing in pencil, crayon and ink; engraving, etching and sculpture; wood carving, pottery, modeling in clay, and art needlework. The department will also include designing and archi-

tectural drawing. Woman in Literature.—This depart-ment will include an exhibit of what Ohio women have accomplished in literature during the century. It will be desirable to make a display of the books that have been written, and of such other achievements as it is possible to

exhibit. Woman in Education.-The lives of hundreds of noble women have been given to the educational work of Ohio. The attempt will be made to give proper recognition to the women, living and dead, who have contributed their lifework to the promotion of the education-

al interests of the state. Woman in the Professions.—This will include such a display of woman's work as we are able to make in journalism, in

law, and in medicine.
Woman in Benevolences.—Woman, from the beginning of our history, has been the faithful ally of man in the bome, in society, in camp, in the hos-pital, and even on the battlefield. Not of the great benevolent enter prises of our land have been chartered, and are supported and managed by women. In Ohio many of these have and influential auxiliaries. To make a proper showing of this branch of woman's work will be the care of the committee, and we solicit aid from all who have the honor of the state at heart. Women in Reforms .- Ohio women have been among the foremost in all reforms of the hundred years behind

No history of Ohio would be complete if it did not show what part our women have borne in correcting social and political evils, and in raising the standards of social life and morals. Woman in Science.—Ohio women have not failed to distinguish themselves in the scientific field, which is usually accorded entirely to men. Whatever

accorded entirely to man. Whatever they have attained should be properly recognized by the committee on woman's work, and we begeo-operation. Woman in Invention .- Visitors to the centennial of 1888 will be surprised to see the display of useful and ornmental inventions made by the women of the Buckeye state. It is intended that nothing that belongs to this department shall be overlooked. That nothing may forgotten, we ask the aid of the 1,-

500,000 pairs of eyes of Ohio women. Woman in Floriculture and Horticulture.-The women of Ohio have made no mean attainments in these branches of industry. Their love of the beautiful, their delicate appreciation of form and color, united with their artistic instincts, have made them especially successful in landscape gardening and as floral artists. We expect an excellent display of womk in these depart

Woman in Domestic Life. - In this department we hope especially to have a school of cookery in active operation and to show all the improved methods in laundering and other domestic occu-pations. We propose to have the most improved domestic utensils placed by the side of those of a hundred years ago It is designed to make this departmen a source of education as well as of interest to every housewife.

Woman in Art Industries .- In this department we shall display such manufacturing as is carried on by women, in which art and mechanical skill are in-volved. It will include unlinery, dress making, the manufacture of bangings, rugs, carpets, screens, shades and work

of like character.
The Pioneer Woman's Department.— There are heirlooms in thousands of families in the state which will be objects of interest, of veneration even, to the women and children of the new century. The costumes of a hundred years the furniture, and the china, the fabrics our great grandmothers spun and wove, and bleached or dyed, the books they read, their household decorations, all will help to make us acquainted with those to whom we owe everything. This sub-department will undoubtedly be the most attractive in be the most attractive in

the woman's department. The filling of all these sub-departments will depend entirely upon the carnestness of the women of the state. No one woman can secure the exhibits, no committee can do it, for the treasures we want are hidden in the 800,000 nomes of Ohio, but the one and a half million women of the state, combining their efforts, can make such an exposi tion of woman's development achievement as no equal number of people has ever made. Is there a woman in Ohio who is indifferent to the honor of her state, or who will not contribute her effort to the success of this great undertaking? Each woman who con-tributes anything of skill or labor to the general success, will reap the reward of the labor of all. There is not a woman among us who wants to be left out in the general roll-call.

Not everything which may be sug-gested can possibly be displayed, but with a complete knowledge of our re-sources the best exhibit possible can be

made by judicious selection. By your personal influence you can iterest others to prepare their best work for the exhibition. We can not afford to apologize for an inferior display by saying that our best is not presented patriotism of our women must give us their best, and in any case we shall be compelled to assume that we have done our best. Will you see that it is orthy the representative state of the

Character of Exhibits.

In each department the exhibits must be in all cases the best and most representative of their kind. Each department shall, in itself, demonstrate the progress made therein during the century. Primitive machinery, appliances, implements of industry and methods of the pioneers shall, as far as practicable, be shown in connection with the advance, growth and improvements made during the century. The present condi-tion of arts, sciences, education and in-of Grand Army drill corps.

dustries shall be fully shown. To illus-

In the department of machinery the exhibits shall show the machinery used by the pioneers of Ohio in their domes-tic life and the principal improvements thereof, viz: the early methods of spinthereof, viz: the early methods of thereof, viz: the early methods of the ning, reeling, carding, scutching, etc., shall be exhibited in actual practice. its, as far as may be practicable, thus making the exposition historical, progressive, educational and illustrative.

DAIRY CATTLE TEST.

A Series of Tests Conducted Under Management of Board of Exposition Managers.

There is a want of any reliable tests of the relative merits of the several breeds of cattle now competing for public favor as dairy breeds.

The exaggerated statements of breeders and speculators have not inspired confidence among farmers and dairymen, who are not wedded to any one breed. The so-called tests, have been made by owners to give a fictitious value to a favorite cow or family. The dairymen and farmers are desirous to know the relative merits of the cattle claimed to be dairy stock.

In order to arrive at some conclusion on this subject, or to furnish facts that will be accepted as such, the directors of the Ohio centennial exposition, to be held at the capital of the state, have determined to give a test of any or all

breeds for forty days.

An expert dairyman will have charge

All breeds will be admitted to the contest. The cows will be placed in charge of the superintendent, who will see that they have a comfortable stable, abundant feed and water, and the best of They will be free from the annovance of visitors, and have se-cured to them the quiet and comfort as well as feed necessary to highest milk production. An accurate account of feed consumed and milk produced will be made a matter of careful daily record. The milk will be weighed and analyzed and the amounts of solids, fat, and water noted. The chemist who will have charge of this feature of the test will be appointed by the board of directors, because of high character as a chemist and man of integrity.

The milk will also be tested in making

butter and cheese, and the results noted with the nicest accuracy of thermometer and balance. The quality of the butter or cheese made by each cow will also enter into the problem.

It is believed that under this carefully

arranged milk test, continued for a month, the public will be able to know what are the actual capacities of the several breeds, as well as of the individual cows representing the breeds. The results arrived at will be tabulated and appear in the annual report of the board of agriculture for 1888 as a matter of history and public record. It would be strange if some native with a crumpled horn would prove a better allround family cow than any of the imported breeds. There are such Ohio natives as will do credit to the country. Let them come to the test. As soon as the commissioner of the live-stock department and his superintendent of this dairy test complete their outline of requirements of entry and points of comparison the dairymen and farmers will be notified, so they can get their great milkers ready for this centennial test.

Art Department of the Ohio Centennial. It is proposed to make the art department one of the prominent features of the exposition and an earnest endeavor will be made to secure one of the best collections of paintings, sculpture and other art works that has been brought together in the West.

This department will include galleries of paintings, sculpture, drawings, etchings and engravings, decorative ing and designs, architectural designs, art school exhibits, photography, pro fessional and amateur, etc. Industrial art work, as wood carving, stained glass art pottery, mosaics, tapestry, art metal

work, art furniture, etc.

The principal feature will be the galleries of fine art, and it is hoped that the prominent painters and sculptors of the country will recognize this as an opportunity of bringing their work before not only the people of Ohio, but of a very large section of the country of which Ohio is the center. Ohio people, their relatives and friends, are over the United States, and a large portion of them will be present at her hun dredth anniversary.

The national encampment of the Grand Army of the Republic will alone bring 300,000 people to the city, and many other organizations will hold their annual meetings in Columbus during the exposition, so that an immense attend-

Every artist, native of Ohio, or whoever called Ohio "home," should take special pride in her centennial exposition, and not only be represented by his best work, but urge upon others the importance of doing the tion in this department not being limit-

ed to Ohio artists.

The art galleries will be in a perma ent, substantial building of brick and stone, good and proper lighting will be provided, and a competent hanging committee will endeavor to do all pict tures justice. Artists will be given every privilege possible, agents having been appointed as follows, to collect, pack and ship, at the expense of the exposition, such paintings and sculpture as may be of sufficient merit: Grady & McKeever, 716 Sixth avenue, New York City, painting; A. Walthausen, 452 West Twenty-ninth street, New York City, sculpture; Earl & Son, 816 Chest-nut street, Philadelphia; Williams & Everett, 79 Boylston street, Boston; George F. Churchell, 261 Wabash avenue, Chicago; J. F. Ryder, 239 Superior street, Cleveland.

Artists sending through the above agents will first secure of them, or of the commissioner of the art department, the necessary blank schedules to to be field out, returning them as di-rected thereon, before July 1, 1888.

All those sending direct to the exposition must first procure the above-named blank schedules of the art commissioner, one of which must be returned before July I, and the other enclosed in how with rich and the other enclosed in the other enclosed closed in box with pictures when ship-

The agents named will collect in their respective cities from July 15 to 20, and box and ship free of expense to the artist, such paintings or sculpture as they shall receive notice of in schedules

Competitive Drills.

During the first week of the centennial there will be competitive drills of each arm of the service, infantry, artillery and cavalry, and premiums will be given on the best drilled regiment, the best drilled company, the best drilled soldier, the best drilled battery. and the best drilled troop of cavalry During the following week there will also be an interesting competitive drill

FIRST IN THE UNION.

Ohio Leads Every State in Many of the Features That Contribute to Greatness.

Therefore, She Should Have an Exposition of Which Every American Should be Proud.

Some of the Things in Which She Has the Van.

Ohio is one-sixth part of the Northwest territory, and is the thirty-third state in the Union in size. Its area is 40.760 square miles, or 26.086.440 acres. Its density of population is now about 58 to the square mile. The entire area is productive, hence a greater diversity of industries exist in Ohio than any state in America.

Statistics show that Ohio, as compared to other states, is first in the number of churches, and in the receipts for school purposes; in the value of farming land; in number of farms between twenty and one hundred acres each: in number of sheep, and in number of pounds of wool produced; in capital employed in manufactures; in value of materials used

planks, shingles, lath, staves, furniture and buggy timbers, etc.

Ornamental woods used in decorating

and for furniture, as veneers of maho gany, maple, wainut, etc.

Dye woods, barks and galls for coloring, tanning and medicinal purposes, resin, pitch tar, sugar, wool manufactured from pine, pulp from spruce, etc. Lichens, mosses, jungi, ferns, seeds, nuts, fruits, etc.

Implements for the cultivation and working of forests.

Trees, shrubs, plants and herbs contributed, can have price attached, if they are desired to be sold, otherwise. cost of transportation and care will be allowed where entries are not made in competition for premiums.

Professor Henry A. Weber of State university is preparing a class of trained chemists. He will transfer his entire laboratory to the department of science and conduct by his class, during the exposition, a most interesting series of chemical experiments, tests and analyses, showing to the people the wonderful progress and achievements of chemical science. Analyses of milk, water, sirups, sugars, vinegar, baking powders, honey, spices, liquors, can-dies, various mineral compounds, fertil-izers, etc., will be made by the class and many experiments performed that will be of intense interest to the visitors. Professor Weber is the learned chemist of the state dairy and food commission.

THE BOYS IN BLUE.

The Grand Army of the Union Will March Two Hundred Thousand Men Strong,

Keeping Step to the Music of the Union at the Coming Grand Army Encampment.

To be Held at Columbus the Second Week of the Ohio Centennial.

Seven years ago the Grand Army in Ohio was 2000 strong, now it is crowding 40,000-then the Grand Army of the whole nation was 49,000, now it is nearly 400,000-and along with this wonderful growth there has been such wisdom in its management, and such divine charity in its spirit and work as to make its future permanent and assured as long as the old veterans linger among us. Very soon, however, it must reach its maximum, and then its members will begin to lessen, its ranks will be thinned by the great conquoror and year by year it will decline until the last "comrade" stands alone on the banks of the dark river. Then the mantle will fall upon the "Sons of

great industrial procession, and tens of thousands will doubtless visit the exceition at this time to witness the reat parade. The "grand review" at position at this time to witness the great parade. The "grand review" at the close of the war, when the armies of Sherman and Grant returned to Washington, will be remembered for a lifetime. This great procession will be the industrial event of the age and the whole state should be fully represented in it.

HISTORY AND ART.

The Educational, Historical and Art Display the Greatest Ever Seen in the Mississippi Valley—Some Features

Will undoubtedly be the grandest historical, industrial, educational and art exposition ever held in the Missis-

THE MOUND-BUILDERS.

Ohio is one of the richest fields in the United States for archaeological research, and contains more cabinets of archeological specimens than any state in America. While the rank of civilization was not so high among the moundbuilders as appeared among the inhabitants of those countries farther south. yet the remains are more numerous and more sharply defined in the varie-ties found than has been discovered

These facts are so well known to the archæologists and students of history that it will be incumbent on those hav ing specimens to freely contribute to this department that its exhibit will fully justify the assertions of collectors and the expectations of those who will

visit the exposition.

An attempt at classification can not be made here; but the owner of every collection in Ohio, and of all that have been

choice specimens came.

An effort will be made to obtain a complete directory and classification of every collector and collection in the state, and the commissioner of this de-partment earnestly asks every one interested in these studies to assist in making a complete, historical and representative exhibit of Ohio's archeology. Plaster casts in fac-simile may be made of the important earthworks, and in some cases reproductions will be made as nearly correct as to antiquity as it is

now possible to do. department of Indian relics will also embrace all articles illustrating the domestic life, habits, dress, arms, utensils, etc., etc., used by the Indian races who once made the forests of Ohio their home. These can still be found and can also be reproduced. All who

Means of sale and exchange will be afforded all exhibiters, the only reserva-

missioners in charge.

All articles exhibited in this department will be properly catalogued. Copies of this catalogue will be sold at the department for 25 cents each, and when ready will be mailed to any address on receipt of that price. By the means of this catalogue every article will be properly de-scribed, and those for sale or exchange so indicated. By such means purchases and exchanges can be made by persons at a distance. It will also register in a compact, imperishable form the valuable historical and archælogical interests of Ohio at the close of Ohio's first cen-

What Ohio Proposes Celebrating in the Great Event-First Settlement in Northwest Territory.

The question is one of import. Why and what does Ohio celebrate in her first centennial? It is not Ohio merely that erritory belongs not only to the N

It is the purpose of the commission-

sippi valley, and in several departments it will be the greatest ever held on the continent. In the departments of live stock, agriculture, horticulture, machinery and mining and metallurgy it will doubtless far excel the exhibit of the same departments at Philadelphia or New Orleans, while in all the other departments the display will be repre-sentative of the wonderful resources and unequaled advancement of the state. Every county in the state will contribute something of its wealth to enrich and beautify the splendid show. And the people of Ohio and of the whole country gathered at the capital of the state will celebrate with imposing cere-monies and earnest congratulations the grand achievements of the first century of Ohio.

Rich Fields of Archaeology in Ohio-Indian Relies and the Collections of Historical and Representative Specimens.

enriched by Ohio specimens, is appealed to for choice, representative historic do-nations. All will be properly exhibited, classified, labeled and catalogued, so that the visitors can obtain an intelligent idea of the history of every specimen. The archæological exhibit made by Ohio at America's centennial in 1876 was said to excel any save the one made by the Smithsonian institution, and to the credit of Ohio it was truthfully said that much of the value of that exhibit was due to Ohio, from whence many of its

in any way, lend articles for this

exhibit are requested to do so. tion being that all articles once in place can not be removed till the close of the exhibition, without consent of the com-

OUR FIRST CENTENNIAL

celebrates a centennial this year; it is, in fact, a celebration for the "old Northwest" territory. The settlement made y Americans on the left bank of the Muskingum river on that seventh day of April, 1788, was in the "territory northwest of the Ohio river." Ohio did not then exist. When Ohio was created by an act of Congress in 1803, that set-tlement was in her limits. Hence, the centennial of that settlement, the first, organized American settlement in the west territory, but primarily to Ohio in whose limits it now exists. That was re-ally the foundation of Ohio, and it is not only incumbent on Ohio to take the lead in celebrating the centennial of the setdement, but it is equally incumbent on Ohio to invite those other states now with her constituting the territory to join in this centennial. Has Ohio done so? Elsewhere in these columns the answer to this question may be found.

Schools and Classes.

ers to have schools and classes illustrating on the centennial grounds certain features of educational works. In the 'department of public service' there will be a school from the Deaf and Dumb asylum, one from the Blind asylum, one from the Boys' Industrial bome, one from the Girls' Industrial home and one from the Soldiers Orphans' home. In the "woman's department" a kindergarten will be conducted. Training schools will also be introduced in the educational department, showing the splen-did work of these schools in some of the cities of the state and suggesting the possibilities of this kind of practical education to all the children of the

MINING - METALLURGY

The Vast Resources and Products of the Earth—Our Inexhaustible Supply of Coal, Iron, Etc.

A patriotic pride in the development

of our great state should be a sufficient

motive to induce all having arti-

cles illustrative of our vast resources and products that represent our skill in fashioning the crude materials so lavishly bestowed on our most fortunatelysituated commonwealth, to make a suitable effort to so present the fruits of their industry at our coming centennial exposition that all beholders may appreciate the fact that nowhere on all the earth is there an equal extent of territory possessing so varied and so vast and inexhaustible resources. We have more than ten thousand square miles underlaid with coal and more than half of that amount underlaid with iron—coal and iron enough to supply the markets of the world for a period of time greater than all recorded history. Our agricultural lands are equal to the whole extent of the state and susceptible of sustaining a population as deuse as that of Belgium or Lombardy. When that time shall come, and come it will, our state will contain fifteen millions, at least, of inhabitants. Our situation is most fortunate. Our southern border is washed by the beautiful Ohio, yet more useful than beautiful, connecting, as it does, natural means of inland communication unsurpassed, if it is equaled, in any other country. Our northern border lies along Lake Erie, opening additional avenues for water communication so favorable that no equal extent of frontier coast of any land, witnesses an activity so great or a carrying trade so rich or varied. Again, taking into consideration our central location and the fact that the great bulk of the commerce of the continent, from East to West, must pass over our fruitful fields and inexhaustible mines, reasonable to affirm that our lavored state is the "keystone" in fact; and the "Ohio idea" is always so potent in the counsels of the nation that we may conclude it is already plain to all men's minds that the great and beneficent arch of the Union can have no firmer or niore enduring keystone. To the peo-ple of this great state I appeal for an exhibit of your mineral products. This department will include all kinds of metals, metallic compounds and the ores and mineral substances from which they are obtained; also as full an exhibit of the geology of the state as is practical. Crude and manufactured metals.

Every kind and quality of iron and steel now manufactured.

Every variety of coal All kinds of clay and the articles manufactured therefrom.

All kinds of stone used in building, statuary work, ornamental work, for monuments, etc., etc., together with specimens manufactured from the same. Glass and quartz rock and all other naterials from which glass is manu factured, with specimens of work ready

Petrified wood and ornamenal products made from the same.

An exhibit illustrating the manufacture of sait and all the products resulting

therefrom or incident thereto. Crude mineral oils and the products of their distillation. All crude minerals from which chemical products used in the arts or in med-

icine are produced, together with specimens of such products.

All minerals and mineral products not specified, useful, ornamental or . * curious.

Exhibits in geology, as full as possi-ble, are desired, among which the fol-lowing are mentioned, but exhibiters are requested to make their collections

as full as the means at their disposal will permit: The elements constituting rocks, as far as practical.

rais constituting rocks, showing forms of crystals and variety of colors Fragmental rocks, exclusive of limestones, limestones or calcareous rockiron ore rocks, igneous or eruptive rocks, condition, structure and arrangement of rock masses; stratified condi-

As we have said, pride in our great state should be a sufficient inducement. But your efforts will be repaid a hundredfold. You not only make known the resources of our more than princely inheritance, but you make known your products and thereby increase and ex-tend your business. It is desirable that your intentions as to your exhibits should be made known at an early date so that the space and kind of facilities that you need may be reserved or pre-

Board of Directors. The following constitute the board of directors of the Ohio Centennial -Governor J. B. Foraker, president.

H. T. Chittenden of Columbus, vice General S. H. Hurst of Chillicothe, director general, L. B. Harris of Upper Sandusky,

W. S. Foster of Urbana. C. D. Bailey of Gallipolis. General R. Brinkerhoff of Mansfield.

J. C. Levering of Leverings. Henry Talcott of Jefferson. L. N. Bonham of Columbus, secretary, A. A. Graham, J. W. Fleming of Co-

lumbus, assistant secretaries. For the proper systemisation of exhibits the exposition has been divided into the following departments, and each placed in charge of a commissioner

1. History and archeology, A. A. Graham, commissioner, Columbus.
2. Science and education.
3. Fine and industrial arts, W. S. Goodnough, Columbus.
4. Agriculture, S. H. Ellis, Spring-boro.

5. Horticulture, N. H. Albaugh, Tad-6. Floriculture and forestry, Herman

Haerlin, Cincinnati.
7. Live stock, L. G. Delano, Chillicothe.

8. Mining and metallurgy, B. F. Perry, West Andover.

9. Mechanics and machinery, Isaac D.

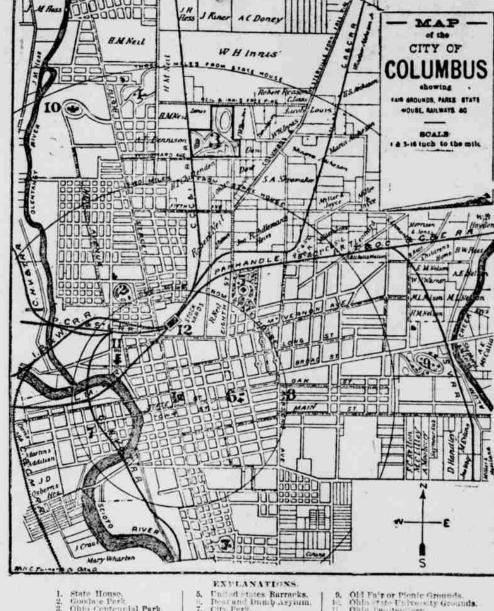

10. Manufactures, John J. Sullivan, Millersburg. 11. Merchandise.

12. Commerce and transportation.
13. Printing and journalism, B. B.

Brown, Zanesville. 14. Woman's work, Mrs. D. L. Williams, Delaware. 15. Public service and charities, Rev. A. G. Byers, Columbus. 16. Entertsinments.

Since there will probably never be so

many Ohio soldiers together again as at the great encampment in September next, it is suggested that every Oblo regiment hold a regimental reunion on Thursday morning, September 13, and that on one evening there be a grand mass meeting or camp-fire of Ohio sol-diers. Thus in addition to the Grand Army reunions the boys from Ohio who "drank from the same canteen" will be able to shake hands again before they

and products made; in number made of seed-sowers, mowers, mowers and reapers combined, scythes, clover-hullers, corn-shellers, threshers, cider and wine presses, and horsepowers; in the number of brick and tile

establishments; in the manufacture of glycerine and nitro-glycerine.

Ohio is second in expenditures for school purposes. In number of farms of all sizes, in the number of bushels of buckwheat raised, in dairy interests. In the number of employes, and in amount of wages paid in manufactures. In number made of corn-planters, hay-

loaders, lawn-mowers, reapers, separa-tors. In the manufacture of fire-brick, and bromine. In number of establish ments, workmen employed, amount of wages paid, value of material and products of iron and steel, and blast furnaces, rolling-mills, Bessemer and open hearth steel-works. In number of coke and curried leather establishments. capital employed in slaughtering and meat - packing establishments. amount of bituminous coal mined. In

the number of stone quarries. In the number of tons of freight moved. Ohio is third in population, in num ber of families, in number of dwellings in number of people engaged in agriculture and in professions. In num ber of elementary and High schools teachers employed, scholars in public schools and average daily attendance. In the value of church property. In improved land in farms, in number of bushels of wheat and Irish potatoes raised. In number of horses in number of In manufactures of all and in number of In kinds, and in number of workmen employed in same. In num-ber made of harvesters, hoes, hand rakes, horse rakes, potato-diggers and fanning-mills. In the manufacture of sulphate of ammonia. In capital employed in brick and tile-works. In number of flour and grist-mills and bushels of wheat ground. In number of tanned leather, sawn lumber and meat-packing establishments. In capi-tal employed in paper-mills. In capi-tal employed in railroads and the num-

ber of railroad engines and freight cars These comparative statistics, if extended, would show equally well as far as they might be carried. Enough are given, however, to show that Ohio can such a state exposition as the world has not yet seen and one which every American will be proud to visit.

Forestry.

Forestry will be represented by a suitably drained and trenched piece of ground, arranged with walks, where space will be allotted for showing nurseries of forest trees and shrubbery, nicely labeled, showing class, name, origin, use and culture. In the center of this ground a spacious house will be erected, of logs of different woods, and inside a general display of cuts of woods and the appliances and relations to general manufactures, representations of the advanced stage of transformation into manufactured articles of commerce from rude state to finish. Also pro duce of forests, such as timber and trunks of trees entire or in transverse or truncated sections, with specimens of bark, leaves, flowers, seed vessels and seed, masts, spars, knees, longitudinal sections of trees, railway ties, ship timbers, lumber roughly sawn, as

NATIONAL ENCAMPMENT

Of the Grand Army During the Second Week of Exposition-An Event Not to be Duplicated.

The national encampment of the Grand Army will be held at Columbus during the second week of the centennial exposition. The great procession of Grand Army men will occur on Tuesday, September 11, and will be the most imposing pageant ever witnessed in America. Every department will be largely represented, and every G. A. R. post in Ohio will be present. It is expected that one hundred thousand men will march in the procession with one hundred bands of music, and one hundred powerful drum corps, making the finest procession of Grand Army men ever witnessed in this country. The Grand Army in the Department of Ohio will be organized by regiments, each county constituting a battalion. The local Grand Army committee at Columbus will provide tents or barracks for the accommodation of the delegations from each separate county in Ohio, and from each department in the country, and all will be made comfortable while in camp. Very many of the G. A. R. posts in Ohio are providing a centennial fund in their treasuries to bring the post as a body to Columbus. When this fund is made ample, then the expenses of the entire post during their visit to the encampment are to be paid from it. Thus the poor comrades are to be provided for so that all can come. It is the purpose to encamp as near the Union depot as desirable grounds can be gotten. This will be a great convenience, and will bring all the comrades near together. It is the wish of the comrades that headquarters be established at the State-house, both the national and department beadquarters. This admirable arrangement would relieve the hotels of their great throng, and be an elegant accommodation to all our visitors. The entertainments for the Grand Army will occupy nearly whole week. Keunions, camp-f camp-fires. competitive drills of G. A. R. drill corps fireworks, flambeau clubs and sham battles will occupy the time for four days and nights and all the memories of the old army life will be charmingly revived.

An Arboretum The commissioner of the department of "floriculture and forestry" is preparing to plant an extensive arboretum of ornamental, forest and fruit trees. The magnitude of this may be judged by the fact that he has been promised for this by one firm in the East a thousand varieties of evergreens. In the midst of this arboretum is to be a rustic house

costs, pulp, and every product of the Newspapers in the Expositio

made of many kinds of wood, and filled

with specimens of wood, seed, bark,

forest. The oldest copies of the first news papers published in Ohio will be on exhibition, and fac-similes of some of them will be on sale. A sample copy of every newspapor now published in the state will also be shown, and the list is over

tance of nearly 1000 miles. In this great center of the nation 250,000 of the comrades live, who have not enjoyed the opportunity to attend a national enopment. This year they will come to Columbus and there will be such a grand patriotic reunion as was never before in this land. One hundred thousand will surely come and we should not be surprised to see 100,000 beroes in the lines, and the open hand and warm heart of Ohio will give them welcome. Colorado may show them more rugged mountains; Minnesota may show them broader wheat-fields; Fortland may charm them with salt-sea air and clam-bakes : Cali fornia may tempt and sate them with gave birth to Grant and Sherman Sheridan and McPherson and Garfield, and sent 300,000 patriot heroes to the front to follow their fearless leaders wherever duty called, will welcome no these heroic legions of the grand old army with such an enthusiastic welcome of the heart as never found language be-What Will Columbus Do? The question is everywhere asked, 'How can Columbus entertain the vast crowds that will attend the encamp-

men who offered their lives for the

life of the nation. Since the Grand

Army has been truly a grand army the

national encampment has not been held

in a central location. In 1882 it was at Baltimore, in 1883 at Denver, in 1884 at

Minneapolis, in 1885 at Portland, in 1886

at San Francisco, in 1887 at St. Louis. Thus since 1881 it has not been held be-

tween St. Louis and Baltimore, a dis-

V to ans" and

ment and the exposition?" We answer, Columbus can not do this in her hotels, but in her boarding-houses and in her homes she can and will. The local Grand Army committee propose to build barracks and furnish tents for the hosts of the Grand Army—at least 100,-000 of whom are expected. It is intended to organize a complete bureau of entertaiment with a man of business ability at the head of it, and this department will be organized and managed with system and skill. It is expected that a great many thousands living within fifty to seventy miles of Columbus will go and come on the cars, and it is be-lieved that Columbus can amply accommodate all the rest of the people who wish lodging accommodations. As to arrangements for meals and lunches they will be ample for any number who may come. Only during Grand Army week will there be such immense crowds of visitors. Three hundred thousand people can be cared for by the plans proposed, and the manage-ment have confidence that all will be

The Industrial Procession During the third week of the centen-

accommodated.

nial exposition, on Thursday, will occur the great procession of Ohio industries, which will be the most imposing industrial display ever witnessed in the country. The industries of every section of the state will be represented and each will vie with the other to make the finer display. This will be the great week for farmers and fruit-growers. But everybody will want to see the
